

Sales Performance Overview – Project Summary

Project Overview

This project was developed as an end-to-end Power BI business intelligence dashboard designed to transform transactional sales data into a structured and executive-level analytical experience. It covers data modeling, time intelligence, KPI reporting, visual storytelling, and interaction design across sales operations in Ghana, Kenya, Nigeria, and South Africa.

What Was Built

- A separate Date Table was created to support proper calendar modeling and time intelligence calculations.
- A star schema data model was built to connect fact sales data with customer, product, distributor, and sales representative dimensions.
- Core DAX measures were created for Revenue, Net Sales, Units Sold, Customers, Churn Rate, Discounts, and Targets.
- Bookmark-driven filter panels were used instead of permanent slicers to save space and improve dashboard cleanliness.
- A dynamic filter summary card was added to display current slicer selections in real time.

Dashboard Design Logic

The visual layout was structured intentionally to guide the user from high-level KPIs into deeper business analysis. The dashboard begins with executive summary cards, then moves into trend analysis, country comparison, sales representative performance, customer segmentation, product category contribution, and revenue-versus-target monitoring.

Outcome

The final output is a clean and business-focused analytical product that feels more like an executive dashboard than a beginner reporting exercise. It combines strong backend modeling with thoughtful front-end storytelling to support better decision-making.

Key Dashboard Components

Component	Purpose
Revenue Trend Chart	Track monthly sales movement and identify patterns.
Country Performance	Compare market contribution by country.
Sales Representative Analysis	Evaluate operational and individual performance.
Customer Segment Donut	Compare retail and wholesale contribution.

Product Category Treemap	Show business dependency by category.
Revenue vs Target Gauge	Monitor performance against planned goals.
